

## REQUISITES OF AN INTERNATIONAL RESEARCH PAPER

**Introduction:** The author/s should describe what he hoped to achieve accurately, and clearly state the problem being investigated. It should summarize relevant research to provide context, and explain what findings of others, if any, are being challenged or extended. It should describe the experiment, hypothesis; general experimental design or method.

**Methodology:** the author should explain accurately how the data was collected. The design should be suitable for answering the question posed. The paper should have sufficient information to replicate the research. The article should identify the procedures followed. These procedures should be ordered in a meaningful way. If the methods are new, they have to be explained in detail. The sampling should be appropriate. The equipment and materials should be adequately described. The article should make clear what type of data was recorded. The author should be precise in describing measurements.

**Results:** The author should explain in his own words what he/she discovered in the research. It should be clearly laid out and in a logical sequence. You will need to consider if the appropriate analysis has been conducted. The statistics should be correct. *Interpretation of results should not be included in this section.*

**Conclusion/Discussion:** The claims or statements in this section should be supported by the results and seem reasonable. The author shall indicate how the results relate to expectations and to earlier research. The article should explain if it supports or contradicts previous theories. The conclusion should explain how the research has moved the body of scientific knowledge forward.
